BROKK 170

SPECIALIST SUCTION EXCAVATION EQUIPMENT

SPECIALIST SUCTION EXCAVATION

Suction Excavation UK Ltd provide vacuum/suction excavation with nationwide coverage and a 24/7 emergency call out service, in one or two man teams.

We are available for free site consultations anywhere in the UK to assess and help you plan your projects. Operating from various UK locations, so we are never far away. We can operate vehicles from 14 and 26 tonne, right up to 32 tonne. Each machine comes with a vast selection of fan arrangements to suit your requirements and different back arms for every application.

We have now started a specialist vacuum excavation department, supplying Brokk equipment to the construction and rail sectors. Utilising our bespoke remote nozzle system, we can reach extreme distances away from the main suction excavation unit.

These units give us the flexibility to work anywhere off-road, using the power of the very newest suction excavation trucks to safely excavate in hard-to-reach areas. We are heavily involved in using this equipment on train station upgrades, UTX works, online works, wet beds, and much more.

The Brokk 170 is the perfect robot for the suction excavation industry. This lightweight robot offers impressive versatility for use in safe excavation in and around buildings, airports, railways, culvert cleaning and roadworks.

We are able to offer Brokk units in a vast array of situations, such as hard-to-reach areas. Our bespoke suction equipment is married to our high-powered suction excavation units via the use of non-conductive 250mm flexible suction hoses. This allows us to have a 'go-anywhere' approach to safe excavation.

Due to their versatility and the fact they're fully remote controlled via our highly skilled operators, our new Brokk units can be used for a range of applications, including:

- ✓ Safe excavation in and around buildings
- ✓ Grass fieldwork
- ✓ Airports
- ✓ Rail
- ✓ Demolition
- ✓ Culvert cleaning
- ✓ Motorway embankments
- ✓ Passageway works

Suction Excavation UK are constantly pushing the boundaries of Suction Excavation, using new equipment and striving towards non-mechanical excavation.

We are continuously improving site safety across a wide range of industries. Please get in touch for more information.
